

Of all Americans who change their own oil, only 10% of them dispose of their waste oil in the proper Manner.

A single quart of oil will foul the taste of 250,000 gallons of water. Oil kills the floating organisms in fresh water that feed fish, and it kills aquatic life.

What happens when you recycle?

-Used Oil

Used motor oil can be recycled. It can be collected and re-refined. Re-refined oil is as good a lubricant as new oil. *Out of a 42 gallon barrel of crude oil, you get 2 1/2 quarts of new motor oil.* While recycling just one gallon of used motor oil will yield the same 2 1/2 quarts.

-Oil Filters

Used oil filters can be made into rebar, fence posts and other steel products.

**You can make a difference!
If you change your own oil,
don't dump it.**

Recycle it!

For information about the proper disposal of household hazardous waste, please contact:

How much can I bring?

These businesses will accept up to 3 gallons of motor oil, transmission fluid or Antifreeze. Oil filters should be drained before returning to recycling location. Liquids must be free of contaminants.

All you have to do is:

Use a clean container for draining liquids from your vehicle, boat or lawn mower.

Hint: Use a reusable container with a good lid.

Never mix or combine oil with transmission fluid, antifreeze, or other liquids. These mixtures can create hazardous substances and make recycling more difficult.
