

# *I can make a Difference in Protecting our Rivers!*

## **ANALYZE YOUR WORKSITE FOR POTENTIAL STORMWATER POLLUTION!**

Soil erosion from utility work is a major contributor to stormwater pollution. The stormwater carries silt and minerals into the stormdrain. These pollutants enter our streams and rivers, settles to the bottom, covers spawning beds and destroys the ecosystem.

## **Steps to Identifying Potential Stormwater Issue**

- 1. Identify flow direction of stormwater on the roadway in order to setup erosion and sediment plan.**
- 2. Identify and protect any storm drains in effected area.**
- 3. Prevent runoff in construction area.**

**Best Management Practices for Utility Contractors**
